a chatbot is expected to be capable of supporting a cohesive and coherent conversation and be knowledgeable which makes it one of the most complex intelligent systems being designed nowadays designers have to learn to combine intuitive explainable language understanding and reasoning approaches with high performance statistical and deep learning technologies today there are two popular paradigms for chatbot construction 1 build a bot platform with universal nlp and ml capabilities so that a bot developer for a particular enterprise not being an expert can populate it with training data 2 accumulate a huge set of training dialogue data feed it to a deep learning network and expect the trained chatbot to automatically learn how to chat although these two approaches are reported to imitate some intelligent dialogues both of them are unsuitable for enterprise chatbots being unreliable and too brittle the latter approach is based on a belief that some learning miracle will happen and a chatbot will start functioning without a thorough feature and

domain engineering by an expert and interpretable dialogue management algorithms enterprise high performance chatbots with extensive domain knowledge require a mix of statistical inductive deep machine learning and learning from the web syntactic semantic and discourse nlp ontology based reasoning and a state machine to control a dialogue this book will provide a comprehensive source of algorithms and architectures for building chatbots for various domains based on the recent trends in computational linguistics and machine learning the foci of this book are applications of discourse analysis in text relevant assessment dialogue management and content generation which help to overcome the limitations of platform based and data driven based approaches supplementary material and code is available at [github.com/bgalitsky](https://github.com/bgalitsky) relevance based on parse trees

software intensive systems are systems which heavily interact with other systems sensors actuators devices other software systems and users more and more domains are involved with software intensive systems e.g. automotive systems telecommunication systems embedded systems in general industrial automation systems and business applications moreover the outcome of web services delivers a new platform for enabling software intensive systems complex systems research is focused on the overall understanding of systems rather than their components complex systems are very much characterized by the changing environments in which they act by their multiple internal and external interactions they evolve and adapt through internal and external dynamic interactions the development of intelligent systems and agents which can be characterized by ontologies and their logical foundations builds a fruitful impulse for both software intensive systems and complex systems recent researches in the field of intelligent systems robotics neuroscience artificial intelligence and cognitive sciences are very important factors for the future development and innovation of software intensive and complex systems the aim of the book is to deliver a platform of scientific interaction between the three interwoven challenging areas of research and development of future ict enabled applications software intensive systems complex systems and intelligent systems
